Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Project problem statement: The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. The configuration step is prone to oversight or delay, leading to frustration among users and inefficient resource allocation within the IT department.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee / IT procurement team member requesting a standard laptop	order a standard laptop and get it ready to use quickly	the configuration task is not created automatically and is often delayed or missed	there is no automated workflow that links approval of the request to a configuration task	frustrated and uncertain about when my laptop will be ready
PS-2	a member of the Hardware team	receive clear tasks to configure newly arrived laptops	tasks have to be created and assigned manually and are sometimes overlooked	approval and task creation are not connected in an automated flow	overloaded and inefficient, with time wasted on manual follow-ups
