

**Project Design Phase
Solution Architecture**

Date	30 September 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Proposed Solution Architecture – Standard Laptop Order Automation

Components: Requester (user), ServiceNow Service Catalog, Request / Requested Item records, Approval, Flow Designer flow "Standard laptop task", Catalog Task, Hardware assignment group.

Data flow:

1. The requester opens Service Catalog > Hardware > Standard Laptop and clicks Order Now.
2. A Request (REQ) and a Requested Item (RITM) are created and the request goes for approval.
3. The approver approves the request from the Approvers section of the request record.
4. The flow "Standard laptop task", attached to the Standard Laptop item through the Process Engine, is started by its Service Catalog trigger.
5. The Create Catalog Task action creates a Catalog Task from the Requested Item with short description "Laptop need to Configured", Assignment group "Hardware" and Approval "Approved".

6. The Hardware team sees the task, configures the laptop and the task is tracked in the Catalog Tasks section of the Requested Item.

Flow summary: Requester → Service Catalog → Request / Requested Item → Approval → Flow Designer (trigger + Create Catalog Task) → Catalog Task → Hardware team.
