

Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The IT procurement process lacks automation, so standard laptop orders cause delays and manual overhead. The configuration step is prone to oversight, which frustrates users and wastes IT resources.
2.	Idea / Solution description	Automate standard laptop procurement with ServiceNow Flow Designer. When a Standard Laptop is ordered and approved, the flow "Standard laptop task" creates a catalog task (short description "Laptop need to Configured") and assigns it to the Hardware group. The flow is attached to the Standard Laptop catalog item.
3.	Novelty / Uniqueness	Approval-driven automatic task creation and assignment using a low-code flow; no scripting is required, and the Requested Item is linked to its configuration task for easy tracking.
4.	Social Impact / Customer Satisfaction	Users get their laptops configured promptly with shorter waiting times and a transparent request status; the IT team has fewer manual hand-offs and errors.
5.	Business Model (Revenue Model)	Internal efficiency solution rather than a revenue product. Value comes from saved IT staff time, faster laptop delivery and better utilisation of the Hardware team.
6.	Scalability of the Solution	The same flow pattern can be reused for other standard catalog items (monitors, accessories, mobile phones) and for more assignment groups, and it runs on the ServiceNow platform for larger request volumes.
